AhnLab

Environmental Management Policy

AhnLab strives to build “More security, More freedom” through every small effort.

With the goal of continuously improving environmental performance, AhnLab is committed to ensuring that all of its business activities ultimately have a positive impact on the environment. We have also adopted “Every Little Detail (managing every small detail for the environment)” as our catchphrase and will continuously implement, measure, and improve our environmental management performance.

To achieve this, AhnLab is committed to the following:

1. We will comply with domestic and international environmental laws and regulations and actively cooperate with government policies aimed at environmental protection, including greenhouse gas reduction, ecosystem conservation, and addressing water-related issues, thereby fulfilling our corporate social responsibility.
2. We will strive to use and manage energy resources, including electricity and water consumed at our office building, efficiently and reduce carbon emissions.
3. We will effectively operate our environmental management processes established based on the ISO 14001 standard and proactively respond to evolving environmental issues.
4. We will actively provide training and raise awareness among our employees and other stakeholders to foster a shared understanding of environmental responsibility and strengthen voluntary participation in programs that promote environmental awareness.
5. We will disclose our environmental management performance to internal and external stakeholders and pursue sustainable and transparent environmental management.
